

FY03 DON Pilot Project Summary

Project Name: Fleet Operational Sequencing System Automated Content Infrastructure - #1151

Command: NAVSEA - Fleet CSSOS Development and Implementation Team

Functional Area Manager (FAM): Administration

Pilot Summary:

The Fleet CSOSS Development and Implementation Team (FCDIT) is responsible for the authoring, publishing, and delivery of the Combat System Operational Sequencing System (CSOSS) to non-Aegis U.S. Navy Warfighters. This project developed and implemented a centralized content management repository for creating and distributing OSS publications in accordance with the Joint Interactive Electronic Technical Manual Architecture (JIA). This centralized repository decreased document maintenance and production costs while creating a more consistent and accurate product.

Business Value Added:

- Reduces the effort required for re-authoring and producing CSOSS documents
- Streamlines efforts for making document updates and edits by automatically incorporating changes into all affected documents
- Utilizes XML and metadata technology to create a single source document

Pilot Participants:

- NAVSEA CSOSS Team

Targeted Users:

- CSOSS Team
- Any command wanting to develop a content management repository in support of enterprise-wide document publication requirements
