

FY02 DON Pilot Project Summary

Project Name: Multi-media Job Performance Aid – MJPA (#488)

Command: NAVAIR TSD

Functional Area Manager (FAM): Logistics

Pilot Summary:

To address key readiness degraders, MJPA's were developed to combine information given during training and the technical publication instructions into a step-by-step guide on how to perform the specific maintenance action. Along side written instructions, a video or enhanced picture of the maintenance action being performed is presented to the user. This increases the quality of repairs, reduces component rework and prevents premature equipment failure.

Business Value Added:

- Enhances the Navy and Marine Corps Aviation maintenance performance, process and procedures
- Improves time for task performance, rework, training and travel
- Improves fleet readiness
- Reduces total ownership costs

Other Considerations:

- Pilot scoped to address specific readiness degraders.
- Review of procedures assisted identification of source of readiness degraders.

Pilot Participants:

- NAVAIRSYSCOM
- NAWCTSD Orlando
- NAS Jacksonville

Targeted Users:

- Squadrons
- AIMDs
