

# FY03 DON Pilot Project Summary

---

**Project Name:** Student Instructor Management System -SIMS.NET (#1177)

**Command:** BUMED - Naval Survival Training Institute

**Functional Area Manager (FAM):** Training & Education

---

## **Pilot Summary:**

The Naval Survival Training Institute (NSTI) Student/Instructor Management System (SIMS.NET) pilot project will provide a web-based solution that enables NSTI to electronically record, schedule, and report on Aviation Survival Training Center (ASTC) student, instructor, course, and scheduling information. The new system supports an improved training process that positively affects both instructors and students by providing a seamless integration with existing Navy training data repositories.

## **Business Value Added:**

- Provides real-time accounting of all student course completion
- Provides online student scheduling and qualification tracking
- Reduces time and labor required to generate Naval Education Training Command (NETC) quarterly reporting requirements
- Eliminates the current legacy systems at eight ASTC sites and serves as a single authoritative data source

## **Other Considerations:**

- Solution could be leveraged as a model for other Bureau of Medicine and Surgery (BUMED) activities to enhance compliance with Chief of Naval Operations (CNO) training reporting requirements

## **Pilot Participants:**

- NSTI system end-users

## **Targeted Users:**

- NSTI training locations
