

# FY02 DON Pilot Project Summary

---

**Project Name:** Training Oriented User Resource Scheduling (#49)

**Command:** CNET

**Functional Area Manager (FAM):** Training & Education

---

## **Pilot Summary:**

The TOURS Fleet Training Scheduler<sub>atg</sub> project web-enables the process of classroom training scheduling, a module of the Navy's Training Oriented User Resource Scheduling (TOURS) system, for use in the operational Fleet training environment. It assists the Afloat Training Group by providing optimized resource allocation models to the shipboard manager in preparation for forward deployment exercises. The pilot solution is used to generate daily schedules for shipboard operations and training.

## **Business Value Added:**

- Replaces existing manual scheduling process with a centralized, web-based process
- The TOURS program is being used by NETC as a core component for their enterprise-wide Learning Management System (LMS)

## **Other Considerations:**

- A five year NMCI authorization has been received for the TOURS FTS<sub>atg</sub>
- System has been implemented in PACFLT and is being evaluated by LANTFLT
- Functionality supports CNO's Sea Warrior vision
- The Web based solution is available via the NIPRNET

## **Pilot Participants:**

- CNET
- Afloat Training Group Pacific

## **Targeted Users:**

- Afloat Training Group
- CNET
